

Introduction

This notice is to inform customers that a new National Waste Programme eLearning module *Characterisation Overview* is now live and available free of charge to all.

Characterisation Overview eLearning (duration 30 minutes)

The National Programme Office, in consultation with stakeholders, has been developing a framework of training modules to support the industry in knowledge and skills development for the management of LLW.

Characterisation Overview covers: what characterisation is, the principles behind how it should be carried out, when characterisation should take place, how the information is used and why characterisation is important in radioactive waste management.

The course, though freely available, is particularly suited to anyone on a nuclear site who has contact with waste teams or who is directly or indirectly involved with waste generation.

Characterisation Overview training is intended to complement the *Introduction to Low Level Radioactive Waste* and *Waste Loading Plan Awareness* eLearning modules already available.

How to access modules

NWP training modules are available free of charge via the NTN portal. If learners haven't already done so, they will need to register at <https://www.nucleartrainingnetwork.com/>; then insert 'NWP' in the search box and the new course and all existing NWP training modules will appear.

Further Information and Questions

For all other enquiries relating to this Customer Notice, please e-mail: National Programme Office via nwp@llwrsite.com

Distribution List

We have issued this Notice to the following people from your Company's Contact Details Form (Reference: WSC-FOR-CON):

- All nominated representatives

If you need to update these details, please submit a revised Form: <http://llwrsite.com/waste-services/new-customers/>
